A Note About the Specs...

At the time of printing, these specs were as accurate as possible. But like it says in the catalog:

"Trek bicycles are equipped with components from sources worldwide. Specifications are subject to change without notice".

So if we changed a bike's headset for some reason, the steerer length listed may be incorrect. The information in these pages is not intended to replace good mechanical skills and practices, just to help good mechanics do their job.

A Note About the Format...

Prior to each section of bicycles, we've listed some of the important things to remember in assembly and maintenance of these bikes. We've also tried to list some of the small parts not listed in the bicycle specifications pages.

Along with these specs and the bicycle pages, we've listed many Trek part numbers. These refer to an equivalent replacement part which may or may not be identical to original spec. If you want to make sure you're getting identical parts either refer to your TCG catalog or ask your Trek Inside Rep.

Any part number listed here with a slash '/' means that we're really showing you two part numbers. If 2 digits follow the slash, change the last 2 digits of the part number for the second part. For example, a pair of XTR shift/brake levers is listed as 61927/8, referring to both the left and right levers, having part numbers 61927 and 61928. If you only need one of these, identify the correct side before ordering. Part numbers with a dash '-' refer to a range of parts.

Items which do not have a part number listed were not carried by TCG at the time of printing. However, parts may be added to TCG stock at a later date. Always check with Customer Service regarding the status on parts you need.

Y50

Assembly Details

Inflate Air Shocks

To provide the best service to you, we design all our bike boxes (except tandems) to be shippable via UPS. Large size Y bikes will not fit into a UPS sized box without deflating the rear shock. Before assembly, inflate rear shocks to an air pressure appropriate for the intended user.

Seatposts

Aluminum Y bikes require greasing of the seatposts. However, with OCLV Y bikes, like their Mountain and Road counterparts, DO NOT grease the seatpost. A fiberglass sleeve bonded into the 'seat tube' prevents corrosion, and any grease may cause the seatpost to slip, even with correct seatpost binder torque.

Y bikes are designed to accept 27.2 mm seat posts with a tolerance of 27.10 to 27.20 mm outer diameter. Measure the seatpost for conformity to this tolerance prior to installation.

A minimum length of seatpost must be inserted in the frame. The seatpost may be raised to this point without damaging the frame. For seat post binder bolts, tighten to 85-125 lb•in (9.6-14.1 NM).

Special Torque Specs

Shock mounting bolts	LokTite 242	160-190 lb•in	18.1-21.5 NM
Pivot bolt (fixed side)	LokTite 290	95-115 lb•in	10.7-13.0 NM
Pivot bolt (removable side)	LokTite 242	95-115 lb•in	10.7-13.0 NM
Stratos adjusting cable clamp		6 lb•in	1 NM
Damping adjuster cable stop screw	LokTite 242	6 lb•in	1 NM
Derailleur hanger screws	LokTite 242	20-30 lb•in	2.3-3.4 NM

TCG Part #

Special Parts

Pivot axle assembly	Pivot axle, 2 bolts, 2 washers	64304
Pivot bearing set	Main cylinder bearing, 2 swingarm topshuts	64305
Shock mount bolt set	Front bolt, rear bolt, 2 nuts, 2 washers, 2 star washers	64303
Rear shock mount cable guide		T950135
Remote damping adjuster, Suntour XC		T972926
Damping adjuster cable stop		T960187
Damping adj. stop screw		T960173
Seatpost bottle mount	2 clamps, 2 clamp bolts, 2 cage attachment screws	T950283
Shock pump		T950272
Derailleur hanger kit	Derailleur hanger, 2 screws	T960156

Top Swing Front Derailleurs

When Shimano instituted the Top Swing front derailleur with its lowered band clamp, we had to redesign our Y bike rear triangle to accommodate it. Due to space constraints, the redesigned rear triangle will not work with older, high band clamp front derailleurs.

Removing Headset Cups

When removing an headset in an OCLV frame, make sure the headset removal tool is engaging the headset cup. OCLV framesets do not utilize a continuous headtube, but instead use two short inserts to support the headset cups. If the headset tool is outside the insert, rather than inside the insert and pressing on the cup, frame damage can result.

Bottom Bracket

Be sure bottom bracket threads are clean and well greased before insertion. Failure to do so may cause galling of the threads, especially when inserting into an aluminum bottom bracket shell or aluminum bonded insert (like on our OCLV bikes).

Replacing Pivot Bearings

Pivot bearings are held in place by the pivot assembly, but also with LokTite 290. To remove the bearings, after removing the axle drive them out with an appropriate punch (the right sized socket works great). Clean and prep the surfaces of the frame and new bearings with LokTite primer, being careful not to expose the bearing material or painted surfaces to the primer. LokTite Primer will damage the paint or remove lubrication in the bearing. Apply the LokTite, wipe off any excess after installing the bearings, and assemble the pivot. Allow to cure for 24 hours before riding.

OCLV and Aluminum Mountain Info

Assembly Details

Seatposts

With aluminum mountain bikes lubricate the seatpost before insertion. Apply a thin layer of grease to the section of the seatpost that will be inserted into the frame. Insert the seatpost into the frame, adjust to the proper height, and engage the binder lever or bolt. Never engage the seatpost binder lever with the seatpost out of the frame.

With OCLV Mountain, like their Y and Road counterparts, DO NOT grease the seatpost. A fiberglass sleeve bonded into the seat tube prevents corrosion, and any grease may cause the seatpost to slip, even with correct seatpost binder torque.

OCLV and Aluminum Mountain bikes are designed to accept 27.2 mm seat posts with a tolerance of 27.10 to 27.20 mm outer diameter. Measure the seatpost for conformity to this tolerance prior to installation.

For seat post binder bolts, tighten to 85-125 lb•in (9.6-14.1 NM).

Special Torque Specs

OCLV front derailleur bracket mounting screw	20-25 lb•in (2.3-2.8 NM)
ACSD mounting bolts	30-40 lb•in (35-45 NM)

Special Parts

	TCG Part #
Chainstay guard (Aluminum mountain bikes)	T83663
ACSD plate	
ACSD mounting bolts	

Removing Headset Cups

When removing an headset in an OCLV frame, make sure the headset removal tool is engaging the headset cup. OCLV framesets do not utilize a continuous headtube, but instead use two short inserts to support the headset cups. If the headset tool is outside the insert, rather than inside the insert and pressing on the cup, frame damage can result.

Bottom bracket

Be sure bottom bracket threads are clean and well greased before insertion. Failure to do so may cause galling of the threads, especially when inserting into an aluminum bottom bracket shell or aluminum bonded insert (like on our OCLV Mountain bikes)

Chainstay guard

Aluminum Mountain frames must always be fitted with a chainstay guard to protect against damage in case of chain-suck or overshifting past the inner chainring.

Steel Mountain

Assembly Details

Seatposts

Lubricate the seatpost before insertion. Apply a thin layer of grease to the section of the seatpost that will be inserted into the frame. Insert the seatpost into the frame, adjust to the proper height, and engage the binder lever or bolt. Never engage the seatpost binder lever with the seatpost out of the frame.

Steel Mountain bikes are designed to accept 27.2 mm seatposts with a tolerance of 27.10 to 27.20 mm outer diameter (or in the case of 930SHX and lower numbers; 26.6 mm +0/-0.1mm). Measure aftermarket seatposts for conformity to this tolerance prior to installation.

For seat post binder bolts, tighten to 85-125 lb•in (9.6-14.1 NM).

Bottom bracket

Be sure bottom bracket threads are clean and well greased before insertion. Failure to do so may cause galling of the threads.

Assembly Details

Seatposts

Lubricate the seatpost before insertion. Apply a thin layer of grease to the section of the seatpost that will be inserted into the frame. Insert the seatpost into the frame, adjust to the proper height, and engage the binder lever or bolt. Never engage the seatpost binder lever with the seatpost out of the frame.

Aluminum, 3 Tube Carbon, and some steel hybrid bikes are designed to accept 27.2 mm seatposts with a tolerance of 27.10 to 27.20 mm outer diameter (or in the case of 730 and lower numbers; 26.6 mm +0/-0.1mm). Measure aftermarket seatposts for conformity to this tolerance prior to installation.

For seat post binder bolts, tighten to 85-125 lb•in (9.6-14.1 NM).

Special Parts

TCG Part

Chainstay guard	T83663
Manitou BodyShock seatpost shim (27.2)	T972697
BAU (Brake Actuator Unit)	T950695
Women's BAU	T940358

Bottom bracket

Be sure bottom bracket threads are clean and well greased before insertion. Failure to do so may cause galling of the threads, especially when inserting into an aluminum bottom bracket shell.

Chainstay guard

Aluminum Hybrid frames must always be fitted with a chainstay guard to protect against damage in case of chainsuck or overshifting past the inner chainring.

Assembly Details**Seatposts**

With OCLV Road, like their Y and Mountain counterparts, DO NOT grease the seatpost. A fiberglass sleeve bonded into the 'seat tube' prevents corrosion, and any grease may cause the seatpost to slip, even with correct seatpost binder torque.

Trek road bikes are designed to accept 27.2 mm seat posts (except the 470 and 370, which are 26.6mm) with a tolerance of 27.10 to 27.20 mm outer diameter. Measure the seatpost for conformity to this tolerance prior to installation.

For seat post binder bolts, tighten to 85-125 lb•in (9.6-14.1 NM).

Bottom bracket

Be sure bottom bracket threads are clean and well greased before insertion. Failure to do so may cause galling of the threads, especially when inserting into an aluminum bottom bracket shell or aluminum bonded insert (like on our OCLV bikes).

Chainkeepers and Chainstay guards

OCLV frames must always be fitted with a chainkeeper and chainstay guard to protect against damage in case of chainsuck or overshifting past the inner chainring.

Special Torque Specs

With newer 3 Tube Carbon frames, an internal aluminum sleeve is bonded into the seat tube to prevent possible crushing of the seat tube through extreme overtightening of the front derailleur clamp. However, prior to 1993 this was not done. Instead a plastic insert was used in the derailleur clamp to prevent overtightening. Be especially careful not to overtighten when attaching front derailleurs to older 3 Tube Carbon bikes.

Tighten tandem bottom bracket eccentric expander bolts to 180 lb•in (20.3 NM).

Special Parts

TCG Part #

Chainkeeper	T83663
Chainstay guard	T950130
Tandem bottom bracket eccentric (w/hardware)	T82672
Extra length brake nuts	T950112
Front derailleur braze-on plate (5000, 5200, 5500)	T83201
Front derailleur braze-on plate (5020)	T973749
OCLV bottom bracket cable guide	T942820
Tandem bottom bracket cable guide	T92798
Road SP18 (2300, etc.) bottom bracket cable guide	T963350
Front derailleur frame clamp AD15, 34.9	40090
Top tube foam insert	T82052
Brake Actuator Unit w/barrel adjuster	T950695

Removing Headset Cups

When removing an headset in an OCLV frame, make sure the headset removal tool is engaging the headset cup. OCLV framesets do not utilize a continuous headtube, but instead use two short inserts to support the headset cups. If the headset tool is outside the insert, rather than inside the insert and pressing on the cup, frame damage can result.

OCLV Road Frame Hardware

On OCLV frames, the large diameter tubes add stiffness and strength. However, this increased size can require unconventional fastening of parts. That's why we use a braze-on style front derailleur, and extra long brake attachment nuts.

Road Bikes (continued)

The longer nuts are required for the rear brake on all OCLV frames. It is also required on our new Air Rail fork, found on the 5500 and 5200.

The 5020 uses a different braze-on plate to position the Shimano 105 Triple front derailleur correctly.

Internal Cable Guide Sleeve

Trek Aluminum and 3 Tube Carbon Road bikes use an internally routed rear brake cable for clean, good looks. In some cases of extremely bumpy roads, the cable can bounce inside the top tube, causing an annoying rattle. To prevent this, we provide a foam sleeve which is used to pad the housing inside the top tube.

There are a variety of techniques to install the sleeve, but here's one:

Stand the bike on the floor with the seatpost removed from the frame (do not clamp the seat tube in a repair stand; the chance of damaging the decals is too great). With the cable installed in the housing, thread the cable (and as the cable enters the frame, the housing, too) through the front cable entry hole. With your free hand, insert a finger down the set tube and into the top tube. Allow the cable end to contact the end of your finger, and while pushing the housing further into the frame's front hole, let the pressure of the cable end push your finger back out of the top tube.

With the cable pulled well outside the top tube, slide the sleeve over the cable end and housing, and into the top tube. To help with this, after the cable end is protruding out of the back of the sleeve, pinch the housing through the foam, and pull the housing out from the front of the top tube. But don't let the cable slide back inside the sleeve.

Next, with the sleeve slid as far into the top tube as possible, again reach into the top tube with a finger and find the end of the cable. Use your finger to guide the cable to the rear exit hole of the top tube. When the cable exits the hole, ease the housing out, grease and install the seatpost, and finish your assembly as normal.

At some future time, you may need to install new housing in the frame. Although its preferable that the housing be inside the sleeve, it is not necessary to prevent most rattles. Just install the cable and housing as you normally would.

O.L.D. vs Rear Triangle Spacing

O.L.D. (Over Locknut Dimension) is a measurement of the hub width on the outside of the axle locknuts. When we list O.L.D., we're referring to the rear hub. In addition, we have listed the frame dimensions rather than the hub. This is technically incorrect, but more useful because many of our road frames are designed with a 128mm rear axle spacing to use either a 130 O.L.D. 7/8/9 speed hub, or a 126 O.L.D. 6 speed hub. It does not damage the frame in any way to use either of these hub sizes in a bike with a listed 128 O.L.D.

Recreational, Kids and BMX

Although these bikes may not be particularly expensive, they still deserve a quality assembly. Remember, the customer riding a Mountain Cub today may be shopping for a Y50 in just a few years!

Bikes and Kids

Pay particular attention to greasing the threads on these bikes. They often are left out in the yard when it rains, etc. etc.. Beach cruisers may even be ridden in salt water (shudder!). Make sure to grease the stem bolts (all 4 handlebar clamp bolts on BMX style stems), seatpost, and stem insertion, as well as axle nuts.

Also remember that with kids bikes they must endure hard play and low maintenance. Make sure all the accessories (like chain guards) are aligned and tightened. Also check the chain tension, as this is part of the braking system on a coaster brake equipped bike.

On bikes with training wheels, the correct height of the training wheels depends on the skill of the rider. For new riders just learning: With correct air pressure in the tires and the rider seated on the bike, there should be 3-5 mm clearance between the training wheels and the ground with the bike fully upright. As a rider's skill increases, this gap may be increased to allow leaning the bike in corners, and to teach balance.

Redundant Wheel Retention Devices

With our BMX bikes, do not remove the 'top hat' washers from the front wheel axles. They are redundant retention devices, there to help protect people who neglect to correctly tighten the wheel axle nuts. The portion of the 'tophat' with a smaller diameter fits into the fork's keyhole dropout, while the larger diameter works much like a washer on the outside surface of the fork blade. Make sure they are correctly installed, and instruct the consumer to leave them in place at all times.

Rotors

Some models of BMX bikes are equipped with rotors. When equipped with a rotor, a bike with a front brake can have its handlebars rotated 360 degrees (repeatedly, if you're really good) without catching the brake cable. Bikes with rotors have a specific headset stack with specific washers. do not attempt to remove headset washers for rotor-equipped bikes.

Also pay special attention to the brake adjustment on bikes equipped with rotors. Make sure there is adequate possible adjustment of the brake cable tension with the various barrel adjusters involved.

WARRANTY

Trek Bicycle Corporation Limited Warranty

The Trek Bicycle Corporation warrants each new Trek bicycle frame and rigid fork against defects in workmanship and materials for the lifetime of the original owner, except OCLV carbon and full suspension bikes which are warranted for the first five years of ownership by original owner. Trek Bicycle Corporation likewise warrants all original parts, excluding suspension forks and rear shock absorbers, for a period of one year from the date of purchase. Suspension forks and rear shock absorbers shall be covered by the stated warranty of their original manufacturers. Paint and decals are warranted for one year. This warranty is expressly limited to the repair or replacement of a defective frame, fork, or defective part and is the sole remedy of the warranty. This warranty applies only to the original owner and is not transferable.

Claims under this warranty must be made through an authorized Trek dealer. Proof of purchase is required. A warranty registration card must be completed and received by the Trek Bicycle Corporation before a warranty claim may be processed.

The warranty does not cover normal wear and tear, improper assembly or follow-up maintenance, or installation of parts or accessories not originally intended or compatible with the bicycle as sold.

The warranty does not apply to damage or failure due to accident, misuse, abuse, or neglect. Modification of the frame or components shall void this warranty.

Trek Bicycle Corporation shall not be responsible for incidental or consequential damages. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion may not apply to you. Labor charges for parts changeovers are not covered by the warranty.

This warranty gives the consumer specific legal rights, and those rights may vary from place to place. This warranty does not effect the statutory rights of the consumer.

What to do with a Defective Frame or Fork

When a consumer comes to you with a frame or fork that is covered by the warranty, please do the following:

- Evaluate the item. Trek approves over 90% of all the items that are returned for warranty. Don't be afraid to make a warranty call if it is an obvious warranty claim. We trust you and want you to give your customers the best service possible.
- Call your Inside Sales Rep. They will issue a UPS Call Tag, or a Returned Goods Authorization (RGA) number for the frameset. Trek will repair or replace the item and return it to you. Warranty items cannot be accepted without either a Call Tag or an RGA. This will ensure that the item is properly handled and processed quickly.
- Completely remove ALL parts from the frame or fork before packaging. We make every effort to return a warranty claim as fast as possible. Since tracking parts from a frameset would slow this process considerably, we rely on you to remove and save all parts.

UPS Call Tags and Returned Goods Authorization (RGA) numbers

There are two ways to return a frameset to Trek. UPS Call Tags usually take 5-10 working days to appear at your door. With a Call Tag, there is no shipping charge to you.

To substantially decrease the time for a Call Tag, you can ship the frame or fork to us via normal UPS ground service and we will credit you for the shipping expense. To have a Call Tag or RGA issued, call your Inside Rep with the following information:

- Serial Number
- Size
- Model number
- Color
- Nature of the problem

The Inside Rep will give you the Returned Goods Authorization (RGA) number. Write the number on the outside of the box and keep note of the number for reference if needed for checking on the item.

Items that cannot be repaired will be replaced. Our manufacturing and warranty departments have committed to turning around repairs in 5 working days of receipt of the item. This provides excellent service to the customer.

If an item is to be repaired, have the consumer choose a color from the current production year for the repaint. We can only offer colors from the current production year.
